Qumaa: application and recruiter guide

Purpose, workflows, and operating guidance

Application purpose

Search a local CV library against job requirements, review supporting evidence, and maintain recruiting decisions.

Demonstration scenario

Training & Development Manager
Riyadh food and beverage group
Fictional candidates and screening records

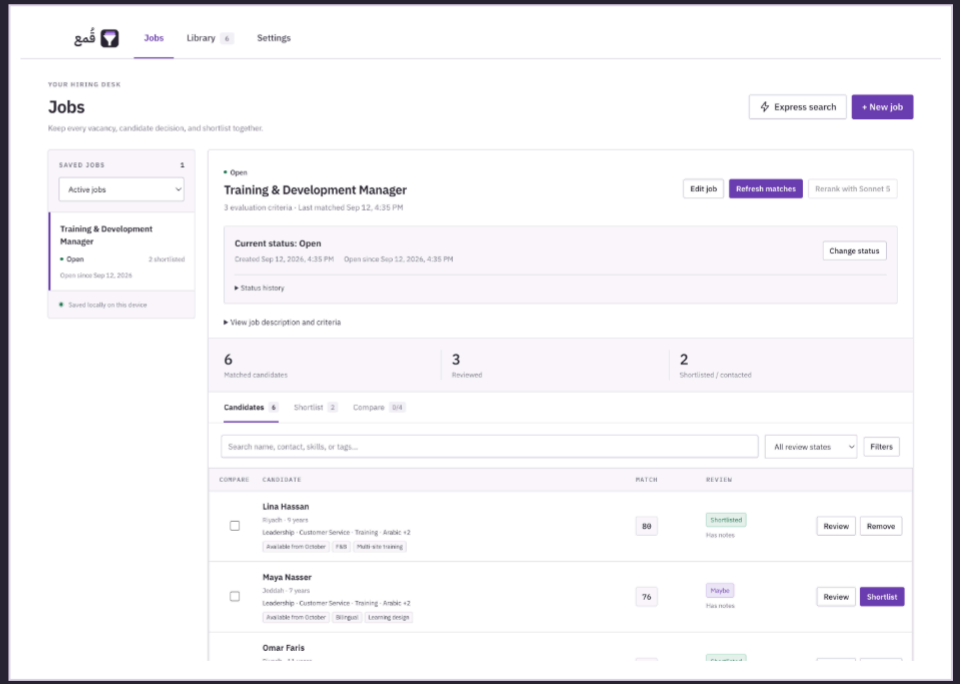

Table of contents

Sections follow the sequence of a recruiting assignment.

Workspace and CV library 03–05

Navigation, workflow, and importing CVs

Jobs and search 06–09

Saved jobs, Express search, criteria, and filters

Candidate assessment 10–15

Evidence, reviews, profiles, comparison, and shortlists

Job records 16–18

Refreshing matches, status history, and hiring outcomes

Optional AI reranking 19–21

Providers, data review, and result interpretation

Operations and reference 22–24

Watched folders, backups, and record scope

Workspace navigation

Jobs contains both saved vacancies and Express search.

Jobs

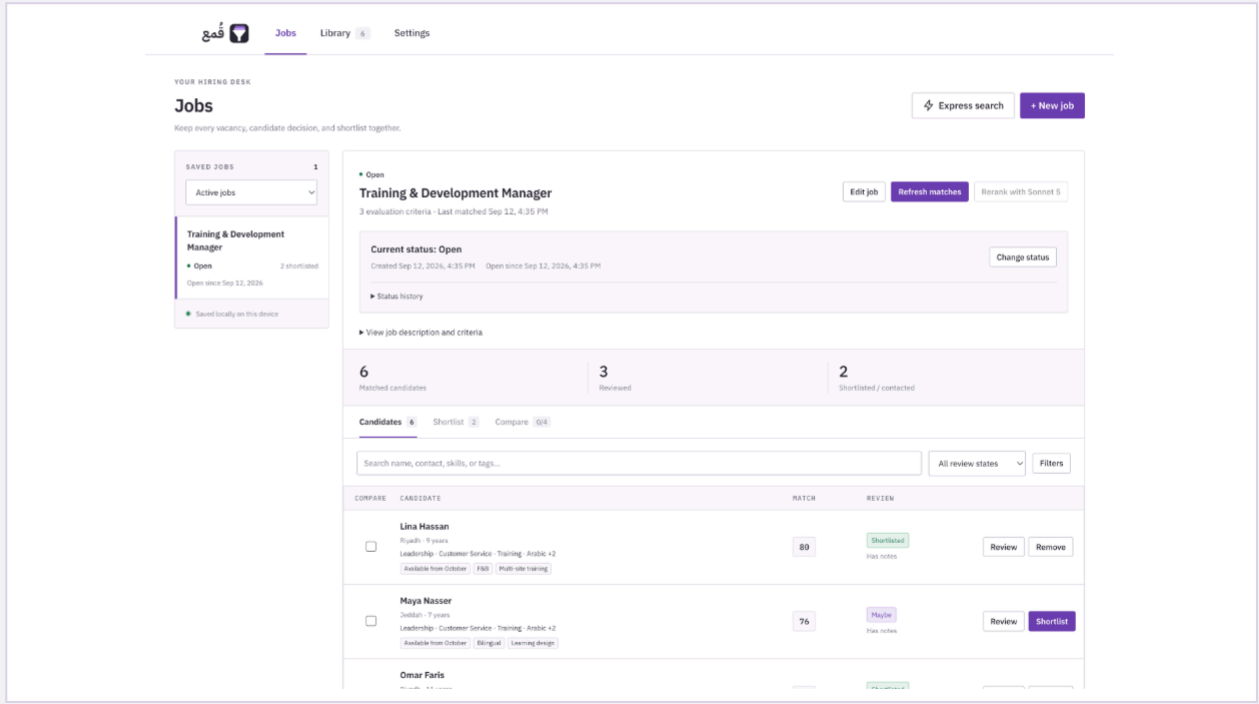

Search vacancies; retain reviews, shortlists, and hiring records.

Library

Import CVs, inspect candidate details, and link CV versions.

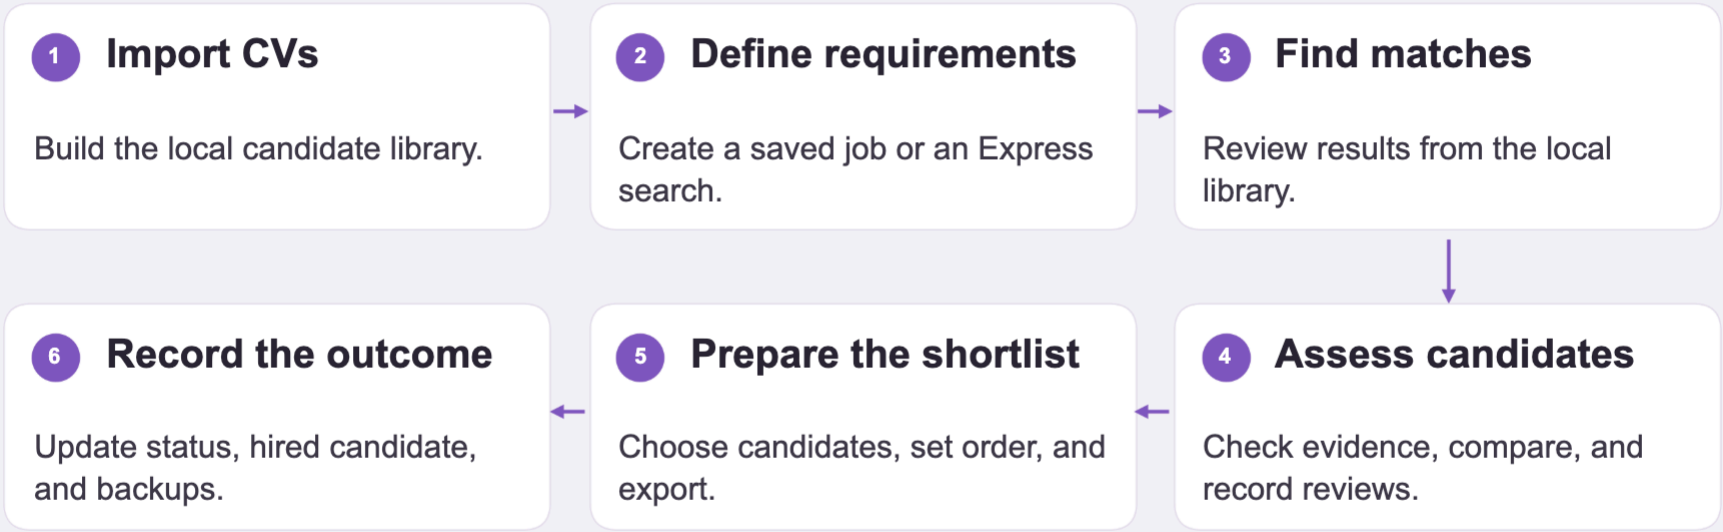

Settings

Set preferences, AI providers, watched folders, and backups.

Recruiting workflow

Example: screening a Training & Development Manager vacancy.

When CVs or requirements change, refresh the saved job and review the updated results.

Importing the CV library

Supported inputs: digital PDF, DOCX, Markdown, and pasted text.

1 Open Library

Choose Add files or Import folder.

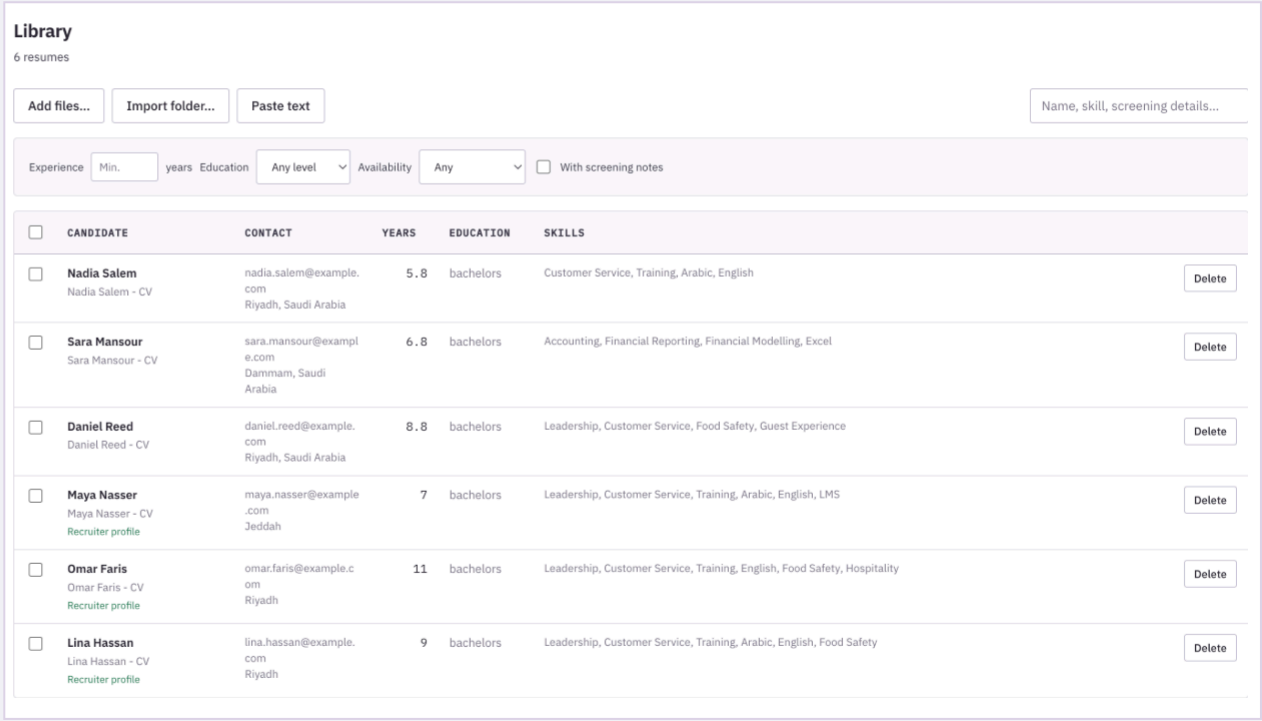

2 Import the CVs

Select documents or use Paste text.

3 Check processing

Review import notices and candidate details.

Local matching requires no API key.

Creating a saved job

Use a saved job for an assignment that requires ongoing records.

1 Select New job

Open Jobs and choose + New job.

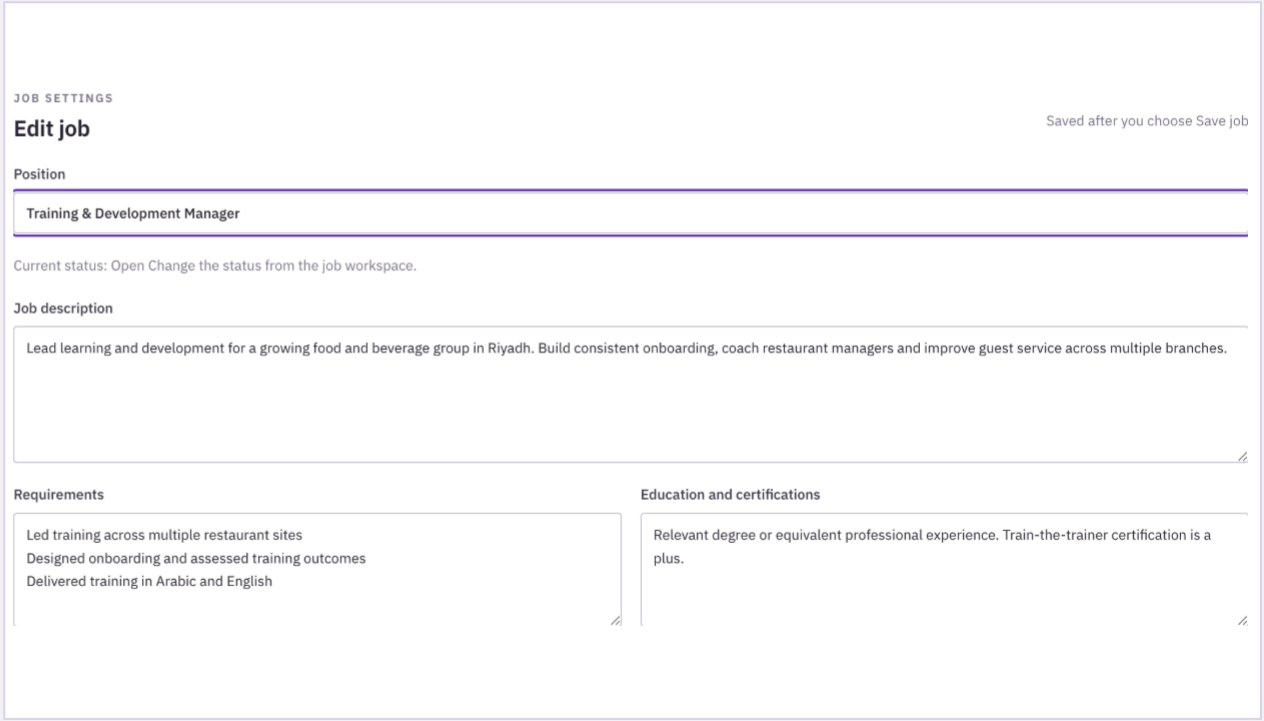

2 Enter the posting

Add the role, requirements, and qualifications.

3 Save the job

The new job starts as Open with a timestamp.

Status changes use the Change status control.

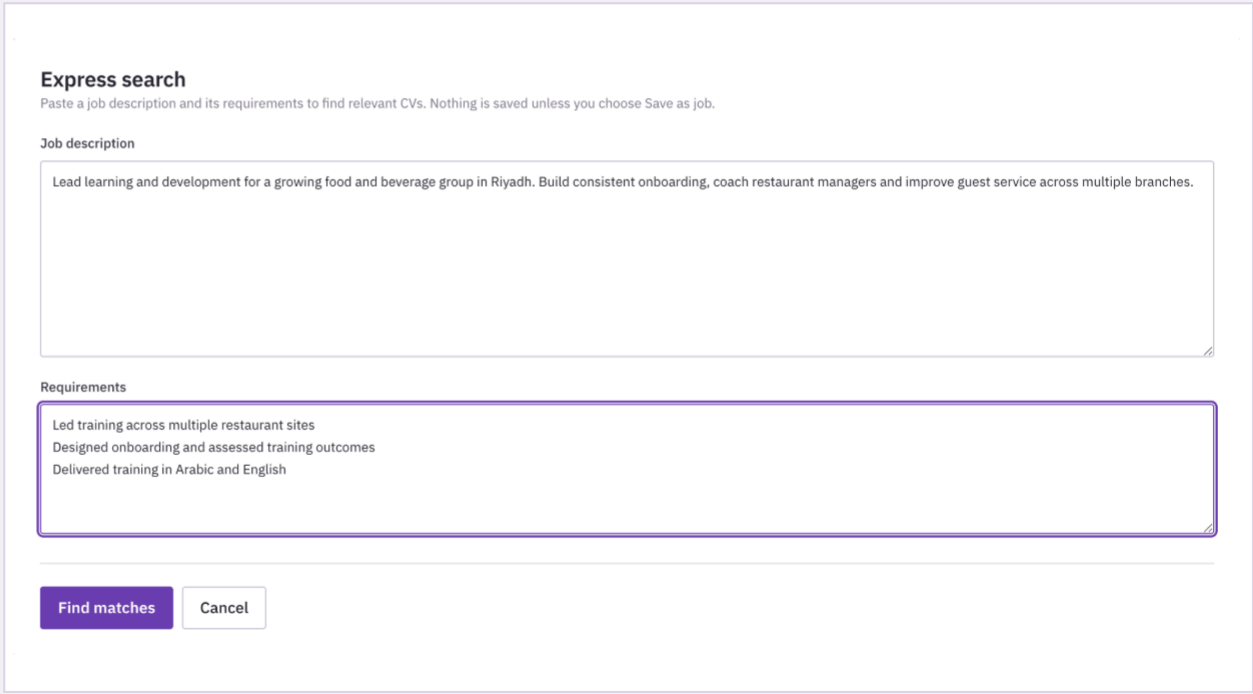

Express search

Paste a job and its requirements for a temporary search of the CV library.

1. **Open Express search**
   In Jobs, use the button beside + New job.
2. **Paste the details**
   Enter a description and requirements; find matches.
3. **Review the results**
   Discard the session or choose Save as job.

Nothing is saved unless you choose Save as job.

Temporary search form

Defining assessment criteria

Separate essential requirements from preferred qualifications.

1 Create criteria

Use requirement lines or select Add criterion.

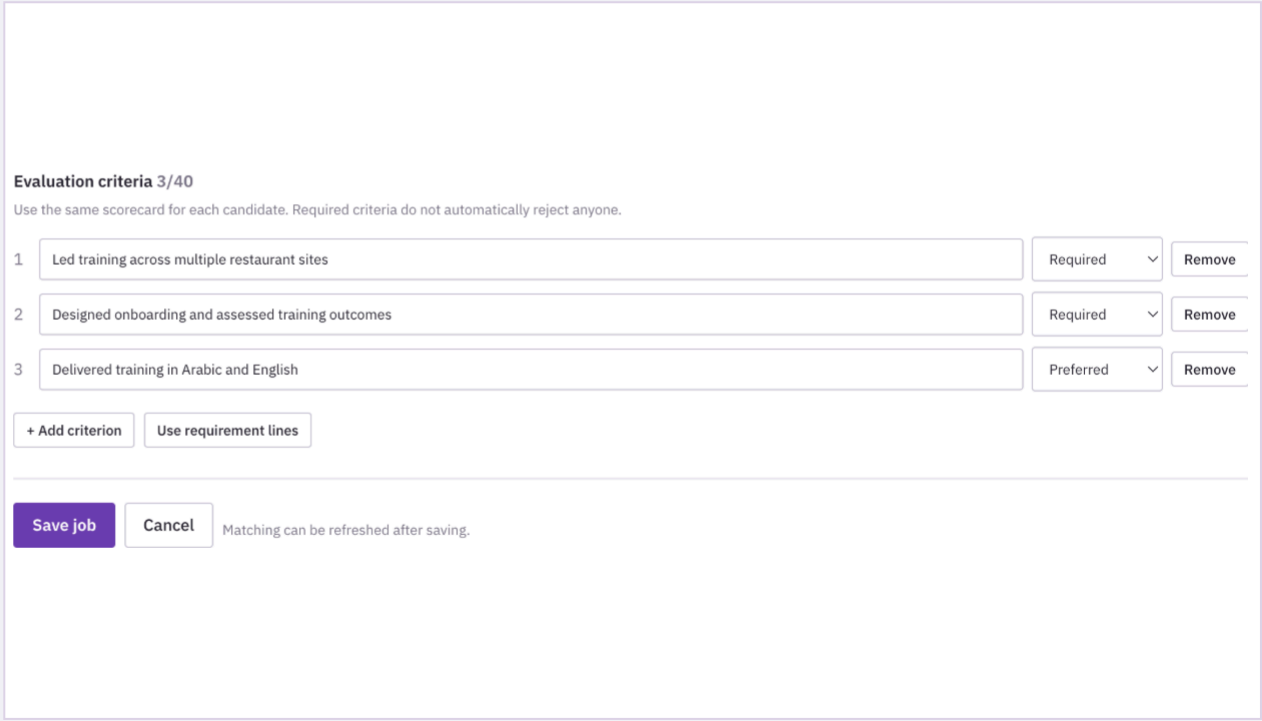

2 Set importance

Choose Required or Preferred for each item.

3 Use clear evidence

Example: led training across restaurant sites.

Required criteria do not automatically reject candidates.

Finding and filtering candidates

Use the posting to search, then narrow the displayed results.

1 Find matches

Search from the selected job.

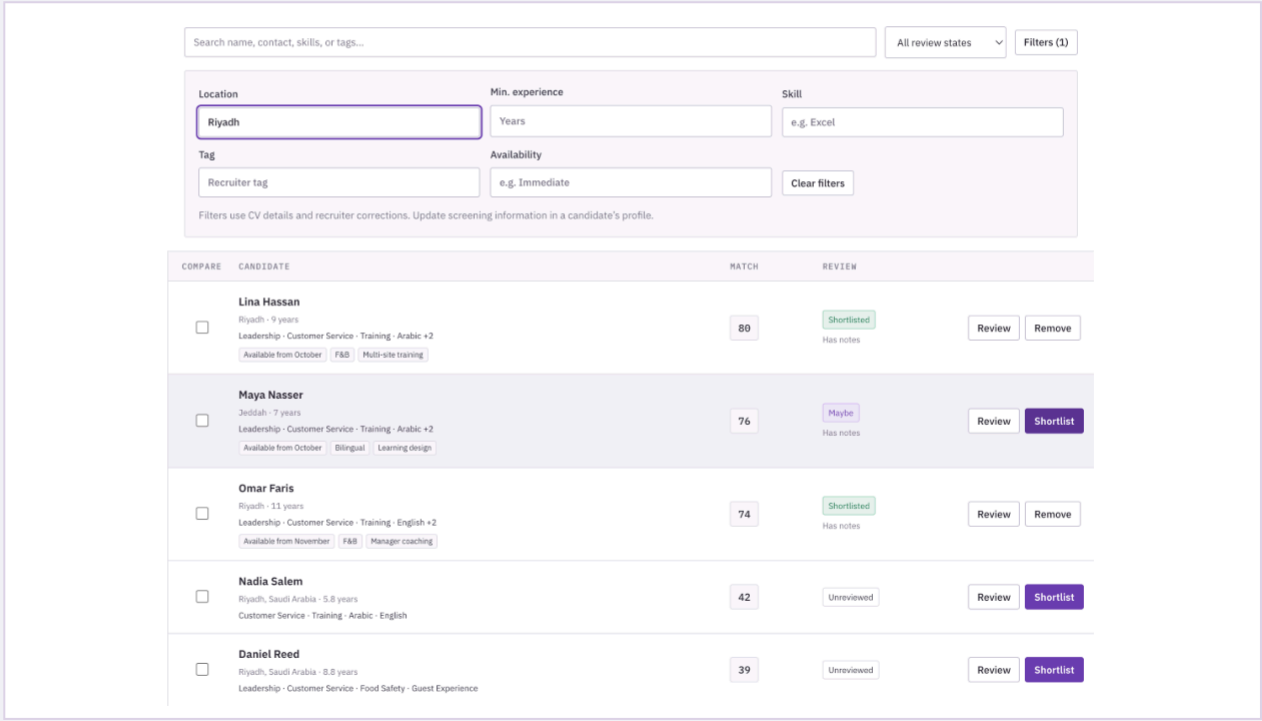

2 Inspect the ranking

Use scores to prioritize evidence review.

3 Apply filters

Filter by location, skills, and more.

Profile corrections are used by screening filters.

Interpreting scores and evidence

Inspect the underlying CV passages before making an assessment.

1 Open a candidate

Select the candidate name in the results.

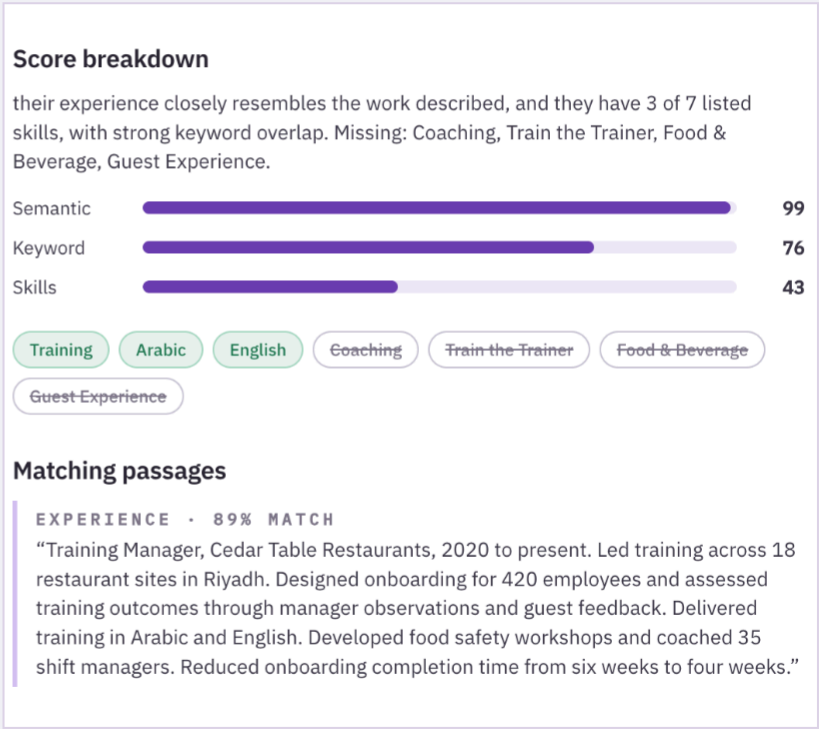

2 Inspect the evidence

Read Score breakdown, Matching passages, and CV text.

3 Identify questions

Record relevant gaps for screening or interview.

A match score is a screening aid, not a hiring decision.

Recording candidate reviews

Job-specific reviews preserve assessments and follow-up questions.

1 Open Review

Choose a review state and enter job notes.

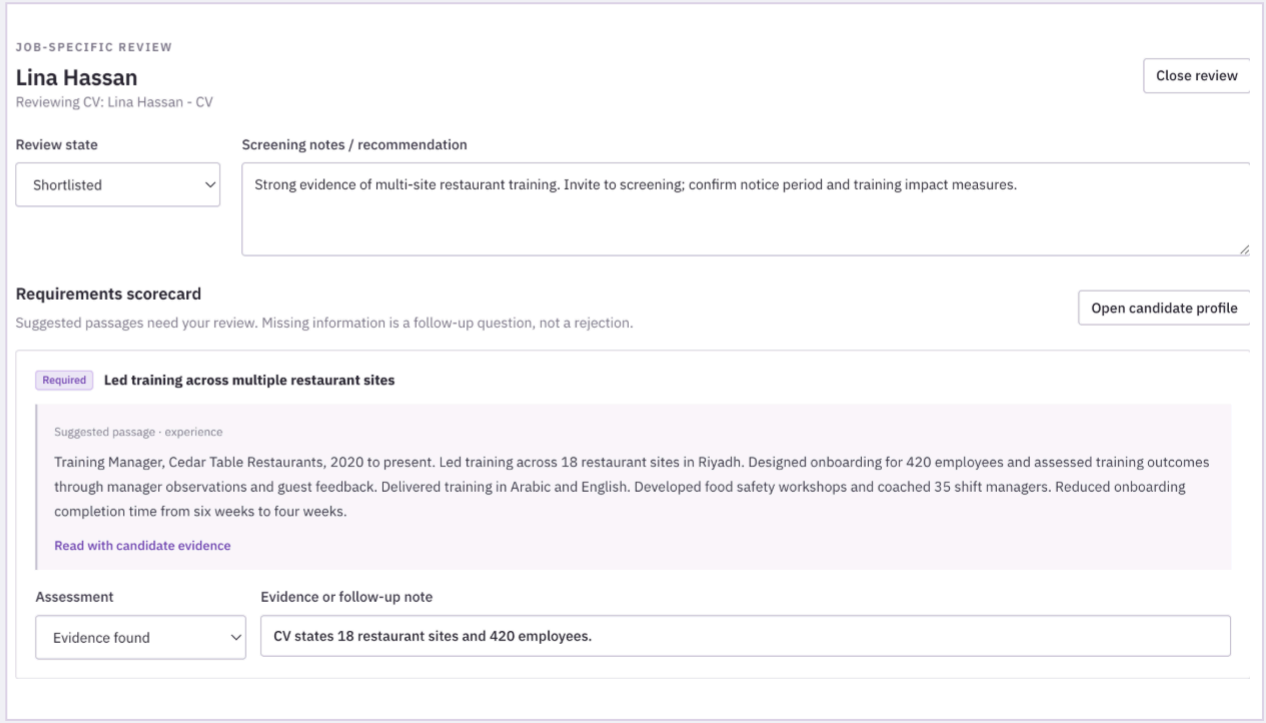

2 Assess each criterion

Record evidence, confirmation, or clarification.

3 Save the review

Save changes before reviewing another person.

Job notes remain attached to this vacancy.

Maintaining candidate profiles

Profiles retain screening information across saved jobs.

1 Open the profile

Choose Add details or Edit profile.

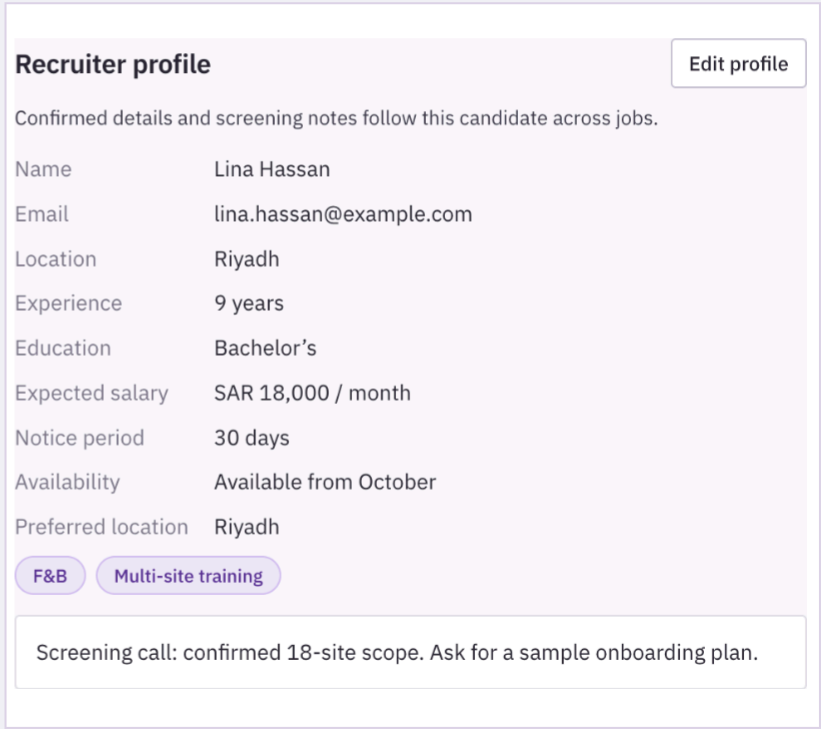

2 Record verified details

Add corrections, salary, notice, availability, and tags.

3 Save the profile

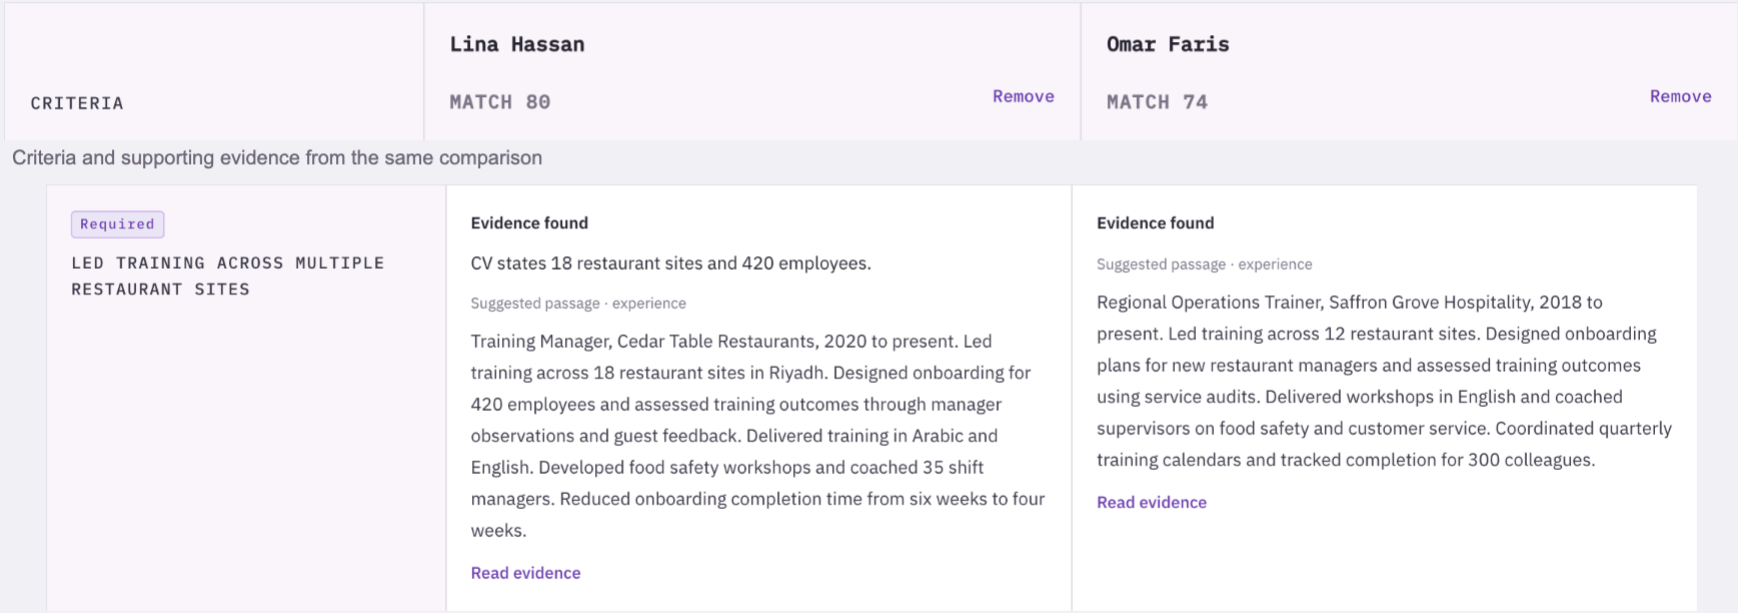

Use job reviews for vacancy-specific decisions.

Profile notes apply across jobs.

Comparing candidates

Select two to four candidates and choose Compare candidates.

Review the same criteria, screening details, and unresolved questions for each person.

Preparing and exporting a shortlist

Choose candidates and set the order for the hiring review.

1 Choose candidates

Set relevant candidates to Shortlisted.

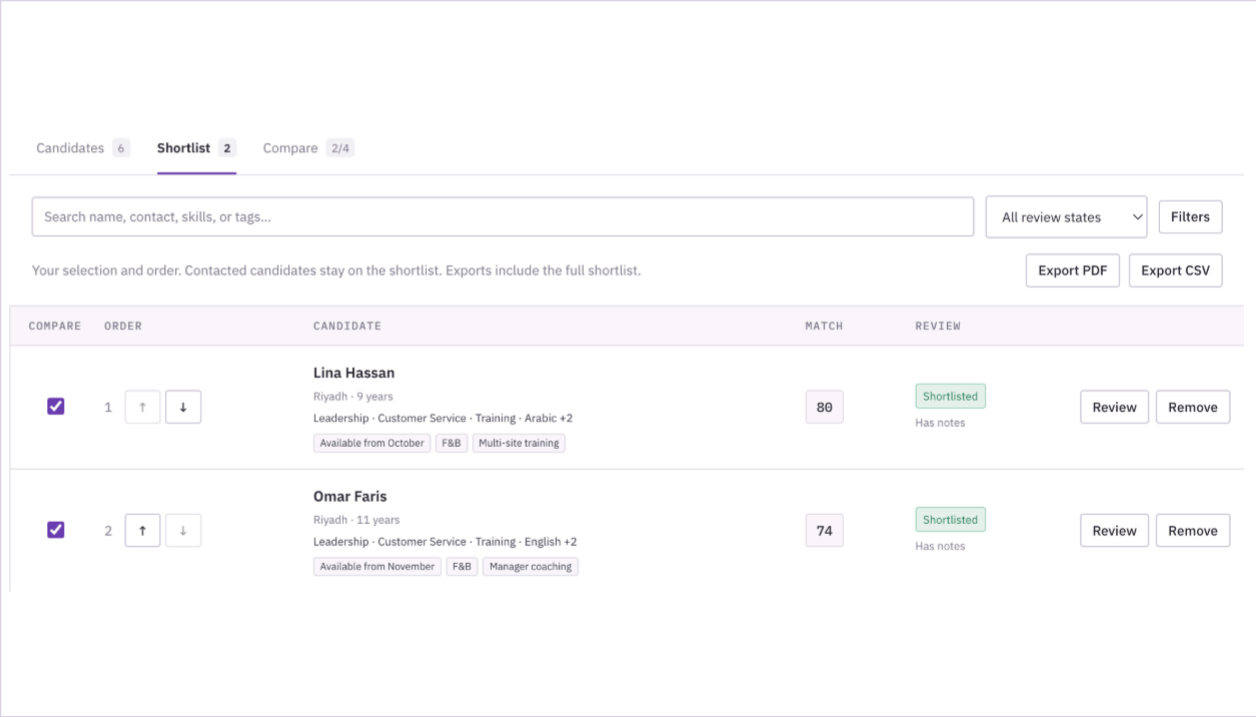

2 Arrange the shortlist

Use the up and down arrows in Shortlist.

3 Export the record

Select Export PDF or Export CSV.

Exports include the full ordered shortlist.

Linking updated CV versions

Confirm identity before linking two records as the same person.

1 Import the new CV

Add the updated document to Library.

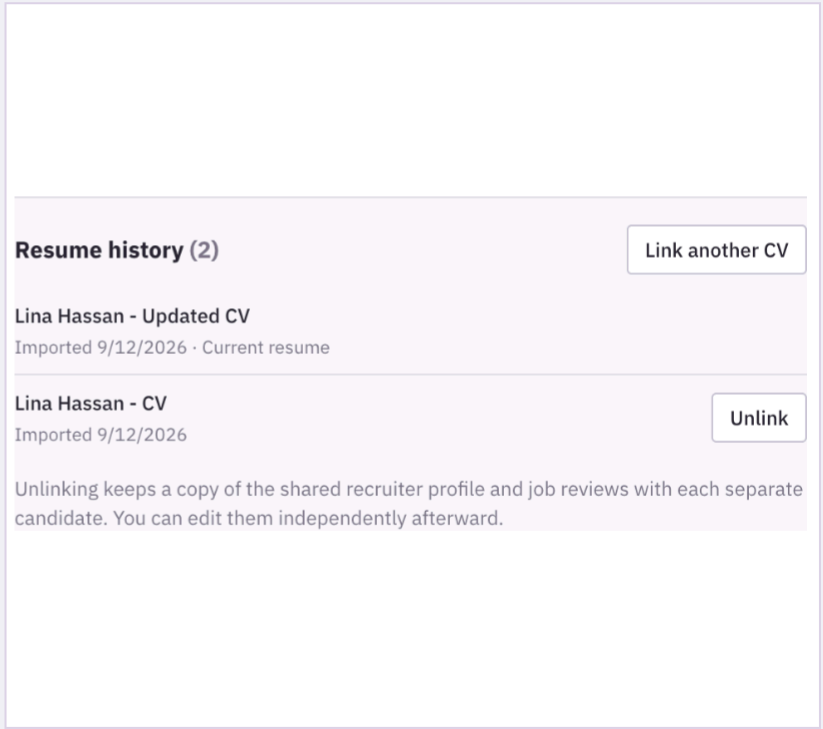

2 Open Resume history

Select Link another CV in the candidate panel.

3 Confirm the link

Choose the record and select Link as same person.

Linked versions retain the candidate's recruiting context.

Refreshing saved matches

Refresh when the library or job requirements change.

1 Reopen the job

Return after importing or updating CVs.

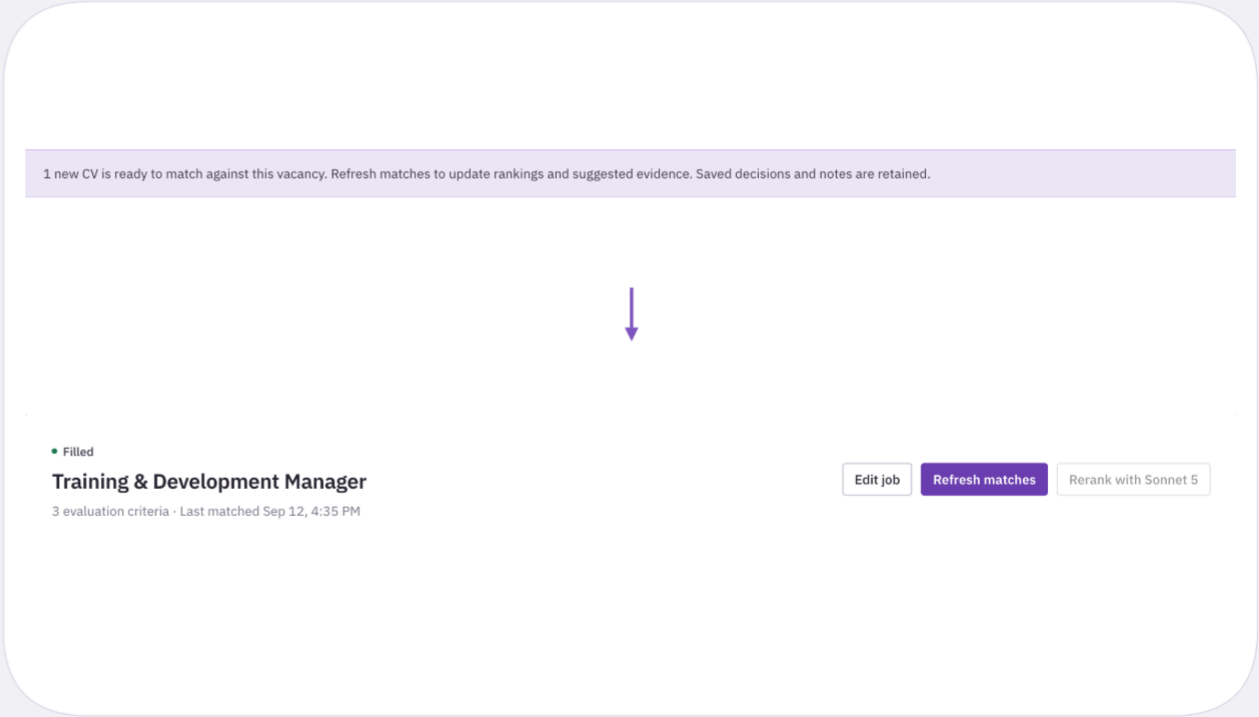

2 Read the notice

Check whether the saved matches are out of date.

3 Refresh matches

Review the updated ranking and evidence.

Saved reviews and notes remain available after refresh.

Changing job status

Each recorded status change includes a date and time.

1 Open Change status

Use the control in the selected job.

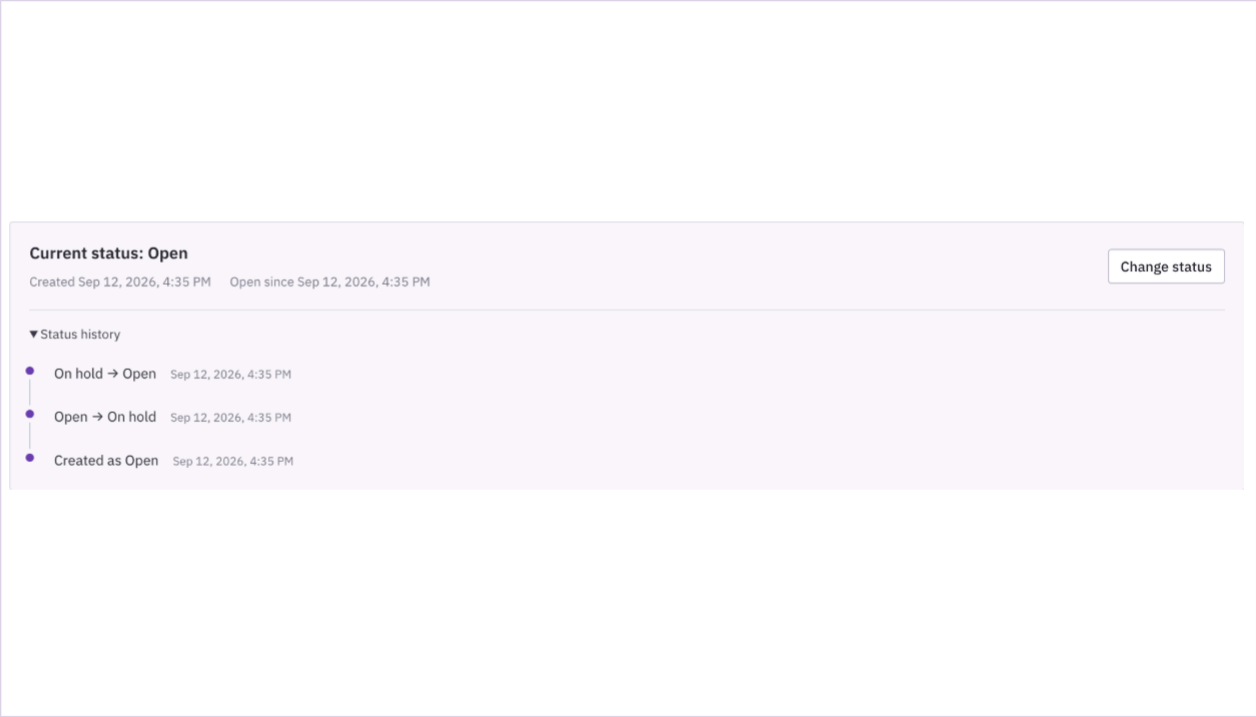

2 Choose the status

Open, On hold, Filled, or Archived.

3 Check the history

Review the creation and status-change timestamps.

Archived jobs retain their recorded hiring outcome.

Recording a hiring outcome

A filled job identifies the hired person and optional backup candidates.

1. **Select Filled**

   Change the job status after confirming the outcome.

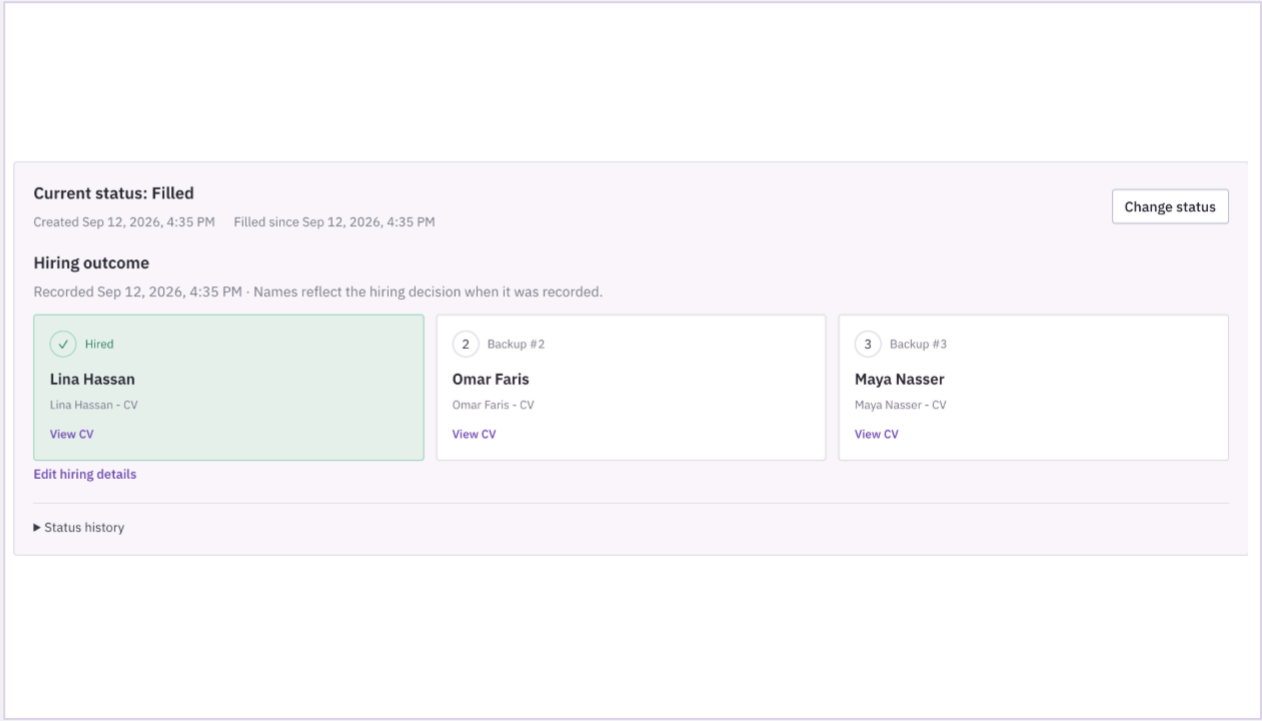

2. **Choose the candidates**

   Select the hired person and backups.

3. **Save and inspect**

   Review the recorded cards, timestamp, and linked CVs.

Backup #3 requires backup #2.

Selecting an AI provider and model

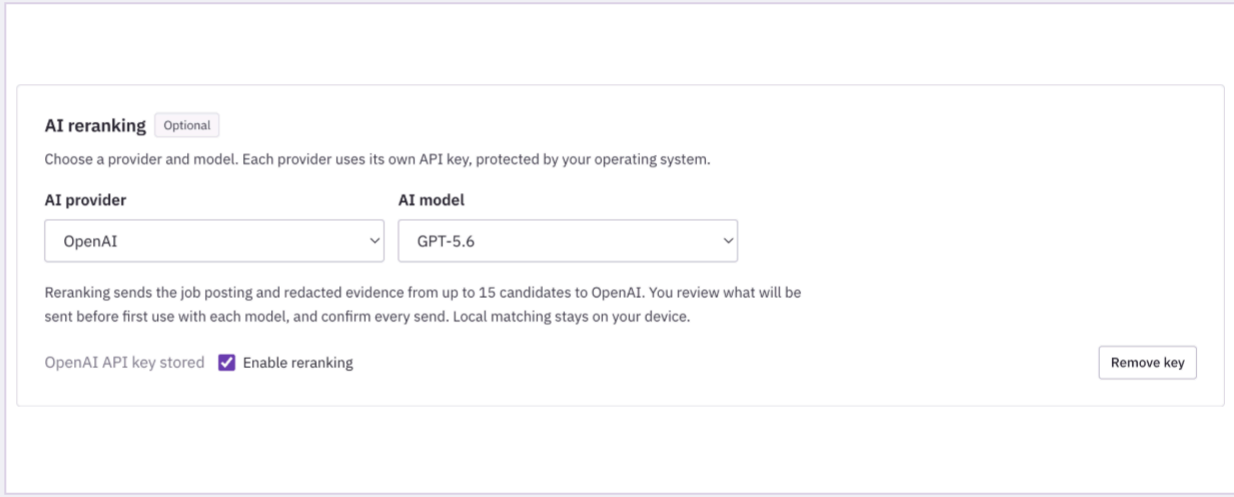

AI reranking is optional and configured in Settings.

Anthropic

Sonnet 5
Opus 5
Fable 5.1

OpenAI

GPT-4o mini
GPT-5.6
GPT-6 Astra

Choose AI provider and AI model, add your own provider key, then enable reranking.

Reviewing data before AI reranking

The notice identifies the selected provider and the data to be sent.

1 Start from results

Choose Rerank with the selected model.

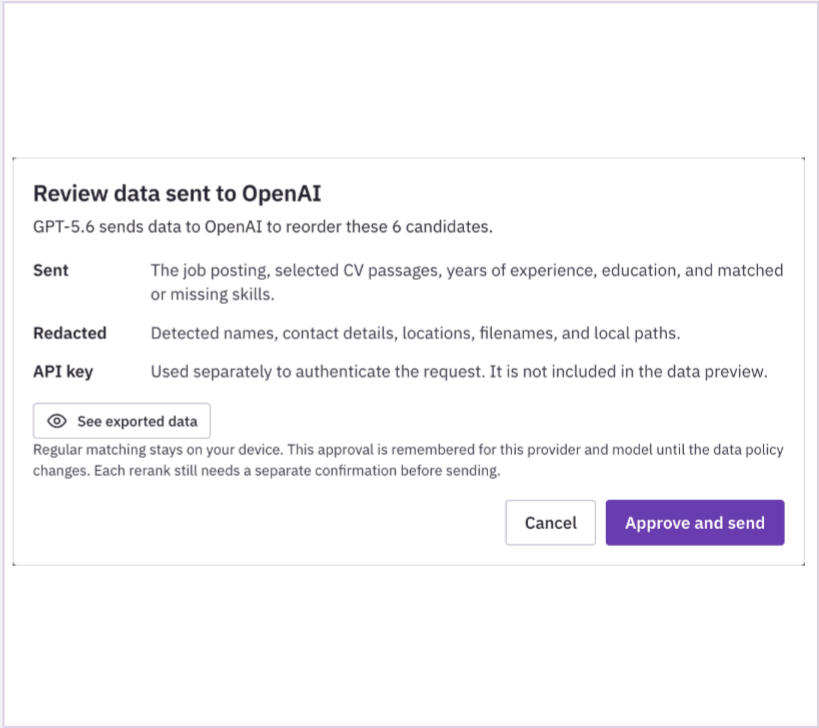

2 Read the summary

Open the eye icon, See exported data, for request details.

3 Confirm the request

Approve only after reviewing the information.

Each rerank requires confirmation before sending.

Understanding an AI rerank

The selected model reorders a limited candidate set using the supplied evidence.

Local results

The application prepares up to 15 candidates from the local search.

Reviewed request

After confirmation, the selected provider receives the posting and redacted passages.

Returned assessment

The model returns an order and a short evidence-based reason for each candidate.

Assessment basis

Relevant experience, demonstrated responsibility, and evidence for job requirements.

Reading the result

Candidate membership and local scores remain unchanged. The model label identifies who produced the order.

Using a watched folder

Import incoming CVs from a selected local folder while Qumaa is running.

1 Open Settings

Find the Watched folder section.

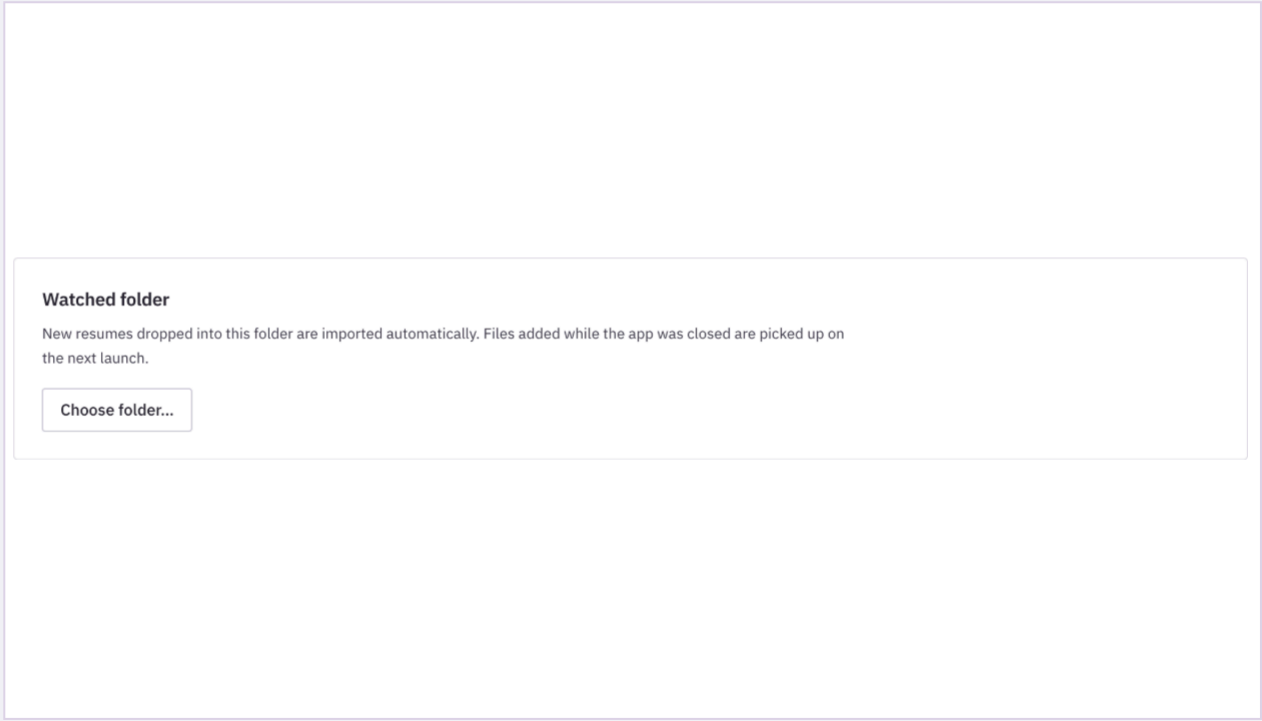

2 Choose the folder

Select the local folder used for incoming CVs.

3 Review imports

Check Library and refresh relevant saved jobs.

Refresh saved matches after new imports.

Backing up and restoring records

Use Settings to create or restore a portable library backup.

1 Create a backup

In Library & backups, select Back up.

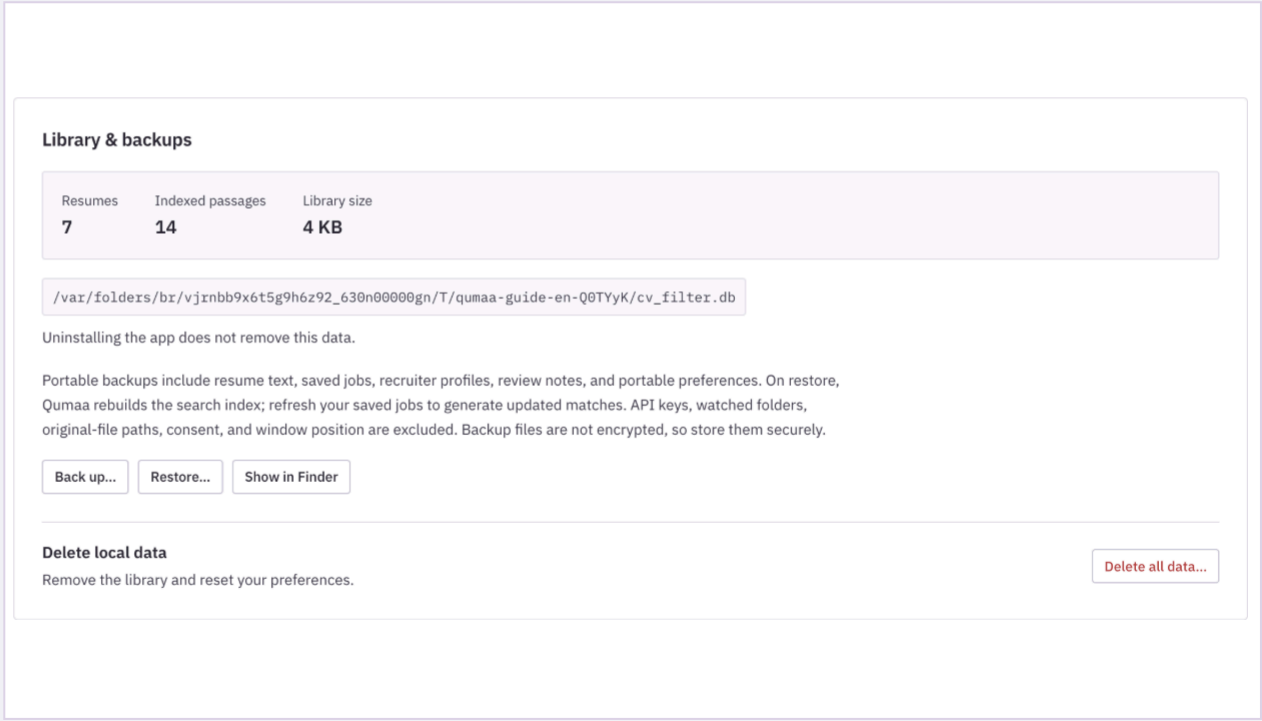

2 Store it securely

Backups contain candidate records.

3 Restore when needed

After indexing finishes, refresh saved matches.

Backups exclude API keys and original CV files.

Reference: where information is kept

Use the appropriate record for the information you need to retain.

Library and candidate profile	CV text, linked versions, corrected details, and general screening notes.
Saved job	Posting, criteria, results, candidate reviews, shortlist, status history, and hiring outcome.
Express search	Temporary posting and search work; retained only if you choose Save as job.
Optional provider request	Reviewed posting and redacted passages, sent only after confirmation.
